

NVR FW V4.1.1 INSTRUCTION

QNAP Security

New Supported Feature and Enhancement

Edge Recording

Seamless recording

Smart Recording

Add SONY G6 Series cameras

**User Defined
Multi-Stream**

Add SONY G6 Series cameras

New Camera Support

2-way Audio

Add AXIS IP cameras

**Surveillance
Storage Expansion**

Compatible with NAS FW4.0.2

**Firmware
4.1.1**

EDGE RECORDING

Seamless Recording

Why Edge Recording

- Problem Scenario:

The recording file cannot be stored when the camera loses connection with the NVR,

- Solution:

Several network cameras support video recording directly to on-board SD-Card now. This SD card recording solution can be leveraged for redundancy in our system.

- Advantage

If the camera loses connection with the NVR, edge recording requires the failover ability to resume the connection.

Disconnected-1

QNAP
SECURITY

**VioStor NVR detects missing recording files
when NVR is offline or camera is disconnected.**

<http://www.qnapsecurity.com/>

QNAP
SECURITY

Disconnected-2

QNAP
SECURITY

The camera will keep recording to its on-board storage (ex: SD card) and maintain the same resolution and frame rate.

Resume the Connection

QNAP
SECURITY

When connection is resumed, the NVR will start recovering the recording file from the moment the connection went down.

Supported Camera Models

AXIS:

AXIS M5013, P1343, P1344, P3343, P5534, Q1602

Important Reminders

- The codec setting of videos recovered from Edge Recording is fixed as H.264.
- Alarm stream of smart recording will be the recording stream on camera edge. So when you enable both smart recording and edge recording, the stream recovered from camera will be the stream you set for alarm recording.
- Edge Recording will only check and recover recording files in the scheduled period.

SURVEILLANCE STORAGE EXPANSION

NVR + NAS for Long-term Recording

Suggested Scenario

- To make sure NVR CPU working well with the recording and storage expansion, we strongly suggest the following limitation of recording network throughput for specific VioStor NVR series, and CPU loading can be reserved for storage expansion.

VS-2100 Pro+
4100 Pro+
6100 Pro+ series:

- Suggested limitation for recording network throughput: 160 Mbps.

VS-8100
Pro+/8100U-RP
Pro(+)/12100U-RP
Pro(+) series

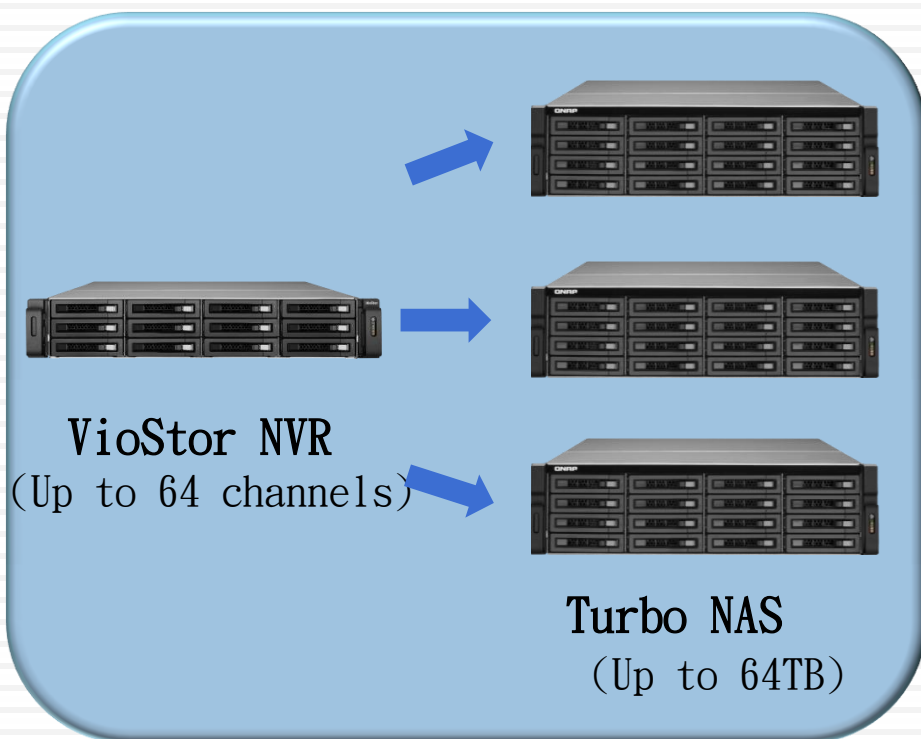

- suggested limitation of recording network throughput: 360 Mbps.

VS-2000 Pro/4000
Pro/6000 Pro
series

- suggested limitation of recording network throughput: 90 Mbps.

Surveillance Storage Expansion

Solution A: One to N

Solution B: One To One

Whooping up to additional **200TB** mass storage

Note: Design and specifications are subject to change without notice.

Important Reminders

- Applied models:
 - QNAP VioStor Pro(+) series (FW v4.1.1 or above)
 - Turbo NAS x69, x79, x70 series (FW v4.0.2).
- NAS must be dedicated for surveillance storage expansion use.
- For NVR and NAS servers located on the same subnet, please always use static IP addresses and the same subnet mask.
- Gigabit switch must be required for this application.

USER DEFINED MULTI-STREAM

Configurable stream profile

User defined Multi-stream

*Stream setting can be configured by users

– Recording Settings

	Camera Name	Resolution	Frame Rate	Quality
1	1. VivoTek FD8134	640x400	5	64K bps
2	2. VivoTek IP8132	640x400	20	1000K bps
3	3. VivoTek IP8133	640x400	20	1000K bps
4	4. VivoTek PZ8111	QCIF	8	1500K bps
5	5. VivoTek SD8111	4CIF	20	1000K bps
6	6. VivoTek FD8136	640x400	20	4000K bps
7	7. VivoTek FD8131	640x400	20	4000K bps
8	8. VivoTek CC8130	640x400	20	4000K bps

Camera Number:

Multi Stream:

Recording Mode:

Main Stream:

Stream No	Video Compression	Resolution	Frame Rate	Quality
1	<input type="text" value="MPEG4"/>	<input type="text" value="640x400"/>	<input type="text" value="5"/>	<input type="text" value="64K bps"/>
2	<input type="text" value="Motion JPEG"/>	<input type="text" value="320x200"/>	<input type="text" value="10"/>	<input type="text" value="Good"/>
3	<input type="text" value="H264"/>	<input type="text" value="176x144"/>	<input type="text" value="25"/>	<input type="text" value="8000K bps"/>

Enable manual recording

Enable recording data retention. Keep recording data for minimum day(s)

Enable auto snapshot

Note: All the settings will not take effect until you click the Apply button. When applying the changes, recording will stop for a while (maximum 1 minute) and then restart.

SMART RECORDING

Save HDD Cost
and Boost Alarm Recording

The Solution

Different Recording Modes

BENEFIT : IMPROVE STORAGE EFFICIENCY ; REDUCE COST

■ System configured (for standard usage):

NVR System automatically select and allocate video streams from IP camera for different use.

■ User defined (for advance usage):

■ Round-the-clock Recording Mode

Regular and Alarm: Record at defined video stream profile.

■ Smart Recording Mode

Regular: Record normal routines in lower quality.

Alarm: Boost recording quality to include enough details for better observation.

Round-the-clock Recording

Use defined – Round-the-clock Recording

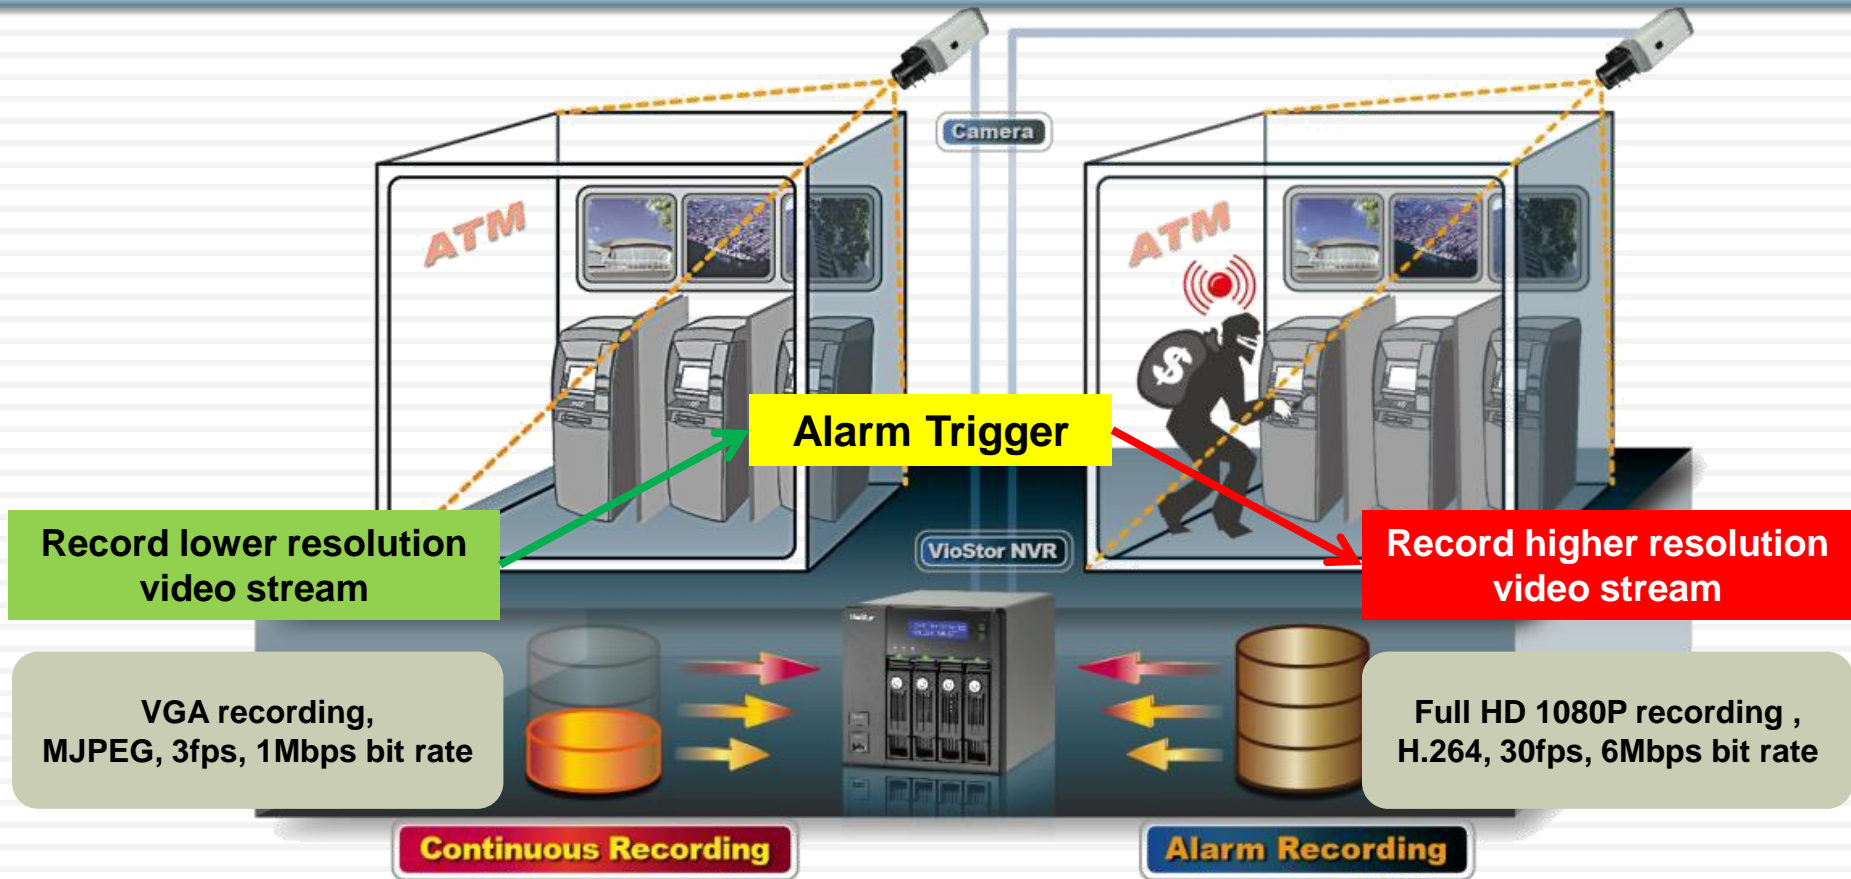

Uses one/same video stream for both alarm and regular recording at same resolution and FPS at ALL times.

---> Same demand for storage space ALL the time. Little flexibility.

Smart Recording

User defined – Smart Recording

Dynamically switch to record higher resolution and FPS on alarm trigger.
Small bit rate stream for Regular Recording; high bit rate stream for Alarm Recording.
---> Higher demand for HDD storage space ONLY when an event occurs!

FD8131/ CC8130

Important Reminders

1. User cannot select the same stream as regular recording or alarm recording at the same time.
2. Camera specification can affect stream content. When user changes one of stream settings, other stream settings could be changed. This is a camera limitation. For example, if user selects H.264 or Full HD as video compression in the stream 1, stream 2 only can support M-JPEG or VGA as video compression.
3. Local display does not support smart recording related configuration.
4. When user modifies the recording setting on the local display, the NVR will change the “Multi- stream profile” from user defined to system configured.
5. Please estimate your internet status, smart recoding can consume more bandwidth.

TWO-WAY AUDIO
NEW CAMERA SUPPORT

Two-way Audio new camera support
