# 1 TEST CERTIFICATION

**Product:** Network Camera

Model: SD8321E; SD8322E; SD8323E

**Brand:** VIVOTEK

Applicant: VIVOTEK INC.

6F, No.192, Lien-Cheng Rd., Chung-Ho, New Taipei City, 235, Taiwan, R.O.C.

Manufacturer: VIVOTEK INC.

5F, No.168, Lien-Cheng Rd., Chung-Ho, New Taipei City, 235, Taiwan, R.O.C.

**Tested:** September 29, 2011 ~ October 04, 2011

Applicable EN 55022: 2006 + A1: 2007, Class A

Standards: CISPR 22: 2008 (Ed 6.0) IEC 61000-4-2: 2008

**AS/NZS CISPR 22: 2009** IEC 61000-4-3: 2006 + A1: 2007

**EN 61000-3-2: 2006**IEC 61000-4-4: 2004

IEC 61000-4-5: 2005

**EN 61000-3-3: 2008**IEC 61000-4-6: 2008
IEC 61000-4-8: 2009

IEC 61000-4-8. 2009

EN 55024: 1998 + A1: 2001 + A2: 2003

Report No.: T110928201-E

#### **Deviation from Applicable Standard**

None

The above equipment was tested by Compliance Certification Services Inc. for compliance with the requirements of technical standards specified above under the EMC Directive 2004/108/EC. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

# **2 TEST RESULT SUMMARY**

EMISSION					
Standard	Result	Remarks			
EN 55022: 2006 + A1: 2007	Conducted (Power Port)	PASS	Meet Class A limit		
CISPR 22: 2008 (Ed 6.0)	Conducted (Telecom port)	PASS	Meet Class A limit		
AS/NZS CISPR 22: 2009	Radiated	PASS	Meet Class A limit		
EN 61000-3-2: 2006	Harmonic current emissions	N/A	Please see the page 29		
EN 61000-3-3: 2008	Voltage fluctuations & flicker	PASS	Meets the requirements		

Report No.: T110928201-E

IMMUNITY [ EN 55024 (1998 + A1: 2001 + A2: 2003) ]						
Standard	Item	Result	Remarks			
IEC 61000-4-2: 2008	ESD	PASS	Meets the requirements of Performance Criterion A			
IEC 61000-4-3: 2006 + A1: 2007	RS	PASS	Meets the requirements of Performance Criterion A			
IEC 61000-4-4: 2004	EFT	PASS	Meets the requirements of Performance Criterion A			
IEC 61000-4-5: 2005	Surge	PASS	Meets the requirements of Performance Criterion A			
IEC 61000-4-6: 2008	CS	PASS	Meets the requirements of Performance Criterion A			
IEC 61000-4-8: 2009	PFMF	N/A	Please see the page 54			
IEC 61000-4-11: 2004	Voltage dips & voltage variations	PASS	Meets the requirements of  Voltage Dips: 1) >95% reduction Performance Criterion A 2) 30% reduction Performance Criterion A  Voltage Interruptions: 1) >95% reduction Performance Criterion C			

**Note:** 1. The statements of test result on the above are decided by the request of test standard only; the measurement uncertainties are not factored into this compliance determination.

2. The information of measurement uncertainty is available upon the customer's request.

# 3 EUT DESCRIPTION

Product	Network Camera		
Brand Name	VIVOTEK		
Model	SD8321E; SD8322E; SD8323E		
Applicant	VIVOTEK INC.		
Housing material	Plastic w/ metal plate		
Identify Number	T110928201		
Received Date	September 28, 2011		
EUT Power Rating	24VAC from AC Adaptor 48VDC from POE		
AC Power During Test	230VAC / 50Hz to AC Adaptor & POE		
AC Adaptor Manufacturer	HUI-HI		
AC Adaptor Model Number	TAA66-2403000F		
AC Adaptor Power Rating	I/P: 230VAC~50Hz; O/P: 24VAC 3000mA		
AC Power Cord Type	Unshielded, 1.5m (Non-detachable) to AC Adaptor		
DC Power Cable Type	Unshielded, 1.8m (Non-detachable) to AC Adaptor		
EUT I/O Cable Type	Unshielded, 1.0m (Non-detachable)		

Report No.: T110928201-E

## **Model Differences**

Model Name	Difference	Tested (Checked)
SD8321E	FCB-EX490EP / 18x / PAL	$\boxtimes$
SD8322E	FCB-EX995EP / 28x / PAL	
SD8323E	FCB-EX1020P / 36x / PAL	

## I/O PORT

I/O PORT TYPES	Q'TY	TESTED WITH
Earphone Port	1	1
2. Microphone Port	1	1
3. LAN Port	1	1
4. IO Port	2	2

Note: None.

# 4 TEST METHODOLOGY

#### 4.1. DECISION OF FINAL TEST MODE

The EUT was tested together with the above additional components, and a configuration, which produced the worst emission levels, was selected and recorded in this report.

Report No.: T110928201-E

The test configuration/ modes are as the following:

#### **Conduction (Power port) Modes:**

1	SD8321E	ADAPTOR MODE
2	SD8322E	ADAPTOR MODE
3	SD8323E	ADAPTOR MODE

#### **Conduction (Telecom port) Modes:**

1	10Mbps		
2	100Mbps		
3	POE MODE		

#### **Radiation Modes:**

1	SD8321E	ADAPTOR MODE
2 ADAPTOR MODE		ADAPTOR MODE
_	SD8322E	ADAPTOR MODE / 1-5GHz
3		POE MODE
4	SD8323E	ADAPTOR MODE

Conduction (Power port): Mode 2
Conduction (Telecom port): Mode 2

Radiation: Mode 2

# 4.2. EUT SYSTEM OPERATION

1. Windows XP boots system.

2. Execute IE browser and type ping 169.254.0.99 –t (EUT), ping 169.254.0.100 –t (Server PC).

**Note:** Test program is self-repeating throughout the test.

# 5 SETUP OF EQUIPMENT UNDER TEST

## 5.1. DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Report No.: T110928201-E

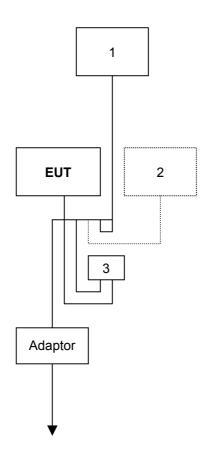

## **Peripherals Devices:**

No.	Equipment	Model No.	Serial No.	FCC ID / BSMI ID	<b>Brand Name</b>	Data Cable	Power Cord
1	Earphone & Microphone	SBZ-4	N/A	N/A	KRONE	Unshielded, 1.8m	N/A
2	Server PC	HD075AV	SGH948QGVW	DOC BSMI: R33001	HP	Unshielded, 20m	Unshielded, 1.8m
3	IO Cable	N/A	N/A	N/A	N/A	Unshielded, 0.5m X2	N/A

#### Note:

- 1) All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2) Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

#### 5.2. CONFIGURATION OF SYSTEM UNDER TEST

# 6 FACILITIES AND ACCREDITATIONS

## 6.1. FACILITIES

All measurement facilities used to collect the measurement data are located at CCSrf Taiwan Sindian Lab. at No.163-1, Jhongsheng Rd, Sindian City, Taipei County 23151, Taiwan (R.O.C.).

Report No.: T110928201-E

The sites are constructed in conformance with the requirements of ANSI C63.4 and CISPR Publication 22. All receiving equipment conforms to CISPR 16-1-1, CISPR 16-1-2, CISPR 16-1-3, CISPR 16-1-4 and CISPR 16-1-5.

#### 6.2. ACCREDITATIONS

Our laboratories are accredited and approved by the following accreditation body according to ISO/IEC 17025.

Taiwan	TAF
USA	A2LA

The measuring facility of laboratories has been authorized or registered by the following approval agencies.

Canada	Industry Canada
Norway	Nemko
Japan	VCCI
Taiwan	BSMI
USA	FCC

Copies of granted accreditation certificates are available for downloading from our web site, <a href="http://www.ccsrf.com">http://www.ccsrf.com</a>

#### 6.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

Measurement	Frequency	Uncertainty
Conducted emissions (Power port)	0.15MHz ~ 30MHz	± 1.19
Conducted emissions (Telecom port)	0.15MHz ~ 30MHz	± 2.04
Radiated emissions	30MHz ~ 1000MHz	± 3.84
Naulateu emissions	1000MHz ~ 6000MHz	± 1.99

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Consistent with industry standard (e.g. CISPR 22: 2005, clause 11, Measurement Uncertainty) determining compliance with the limits shall be base on the results of the compliance measurement. Consequently the measure emissions being less than the maximum allowed emission result in this be a compliant test or passing test.

The acceptable measurement uncertainty value without requiring revision of the compliance statement is base on conducted and radiated emissions being less than  $U_{CISPR}$  which is 3.6dB and 5.2dB respectively. CCS values (called  $U_{Lab}$  in CISPR 16-4-2) is less than  $U_{CISPR}$  as shown in the table above. Therefore, MU need not be considered for compliance.

# 7 EMISSION TEST

## 7.1. CONDUCTED EMISSION MEASUREMENT

#### 7.1.1. LIMITS

FREQUENCY (MHz)	Class A	(dBuV)	Class B (dBuV)	
FREQUENCT (WHZ)	Quasi-peak	Average	Quasi-peak	Average
0.15 - 0.5	79	66	66 - 56	56 - 46
0.50 - 5.0	73	60	56	46
5.0 - 30.0	73	60	60	50

Report No.: T110928201-E

**NOTE**: 1. The lower limit shall apply at the transition frequencies.

- 2. The limit decreases in line with the logarithm of the frequency in the range 0.15 to 0.50 MHz.
- 3. All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

## 7.1.2. TEST INSTRUMENTS

Conducted Emission room # A							
Name of Equipment	Manufacturer	Model	Serial Number	Calibration Due			
TEST RECEIVER	R&S	ESHS20	840455/006	02/22/2012			
LISN (EUT)	SCHWARZBECK	NSLK 8127	8127527	12/13/2011			
LISN	SCHWARZBECK	NSLK 8127	8127526	12/13/2011			
BNC CABLE	MIYAZAKI	5D-FB	BNC A5	02/07/2012			
THERMO- HYGRO METER	TECPEL	DTM-303	NO.3	11/18/2011			
Test S/W	EZ-EMC						

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R = No Calibration Request.

**7.1.3. TEST PROCEDURES** (please refer to measurement standard or CCS SOP PA-031)

#### **Procedure of Preliminary Test**

• The EUT and Support equipment, if needed, was set up as per the test configuration to simulate typical usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per EN 55022 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor standing equipment, it is placed on the ground plane, which has a 15 cm non-conductive covering to insulate the EUT from the ground plane.

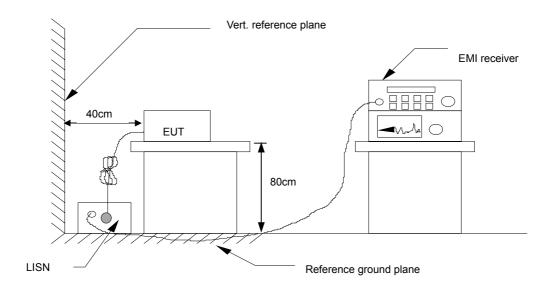

Report No.: T110928201-E

- All I/O cables were positioned to simulate typical actual usage as per EN 55022.
- The test equipment EUT installed received AC main power, through a Line Impedance Stabilization Network (LISN), which supplied power source and was grounded to the ground plane.
- All support equipment power received from a second LISN.
- The EUT test program was started. Emissions were measured on each current carrying line of the EUT using an EMI Test Receiver connected to the LISN powering the EUT.
- The Receiver scanned from 150kHz to 30MHz for emissions in each of the test modes.
- During the above scans, the emissions were maximized by cable manipulation.
- The test mode(s) described in Item 4.1 were scanned during the preliminary test.
- After the preliminary scan, we found the test mode described in Item 4.1 producing the highest emission level.
- The EUT configuration and cable configuration of the above highest emission levels were recorded for reference of the final test.

#### **Procedure of Final Test**

- EUT and support equipment were set up on the test bench as per the configuration with highest emission level in the preliminary test.
- A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions. Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit.
- The test data of the worst-case condition(s) was recorded.

#### 7.1.4. TEST SETUP

Report No.: T110928201-E

• For the actual test configuration, please refer to the related item - Photographs of the Test Configuration.

#### 7.1.5. DATA SAMPLE

Freq.	Reading	Factor	Result	Limit	Margin	Detector	Line
(MHz)	(dBuV)	(dB)	(dBuV)	(dBuV)	(dB)	(P/Q/A)	(L1/L2)
x.xx	42.95	0.55	43.50	73	-29.50	Q	

Freq. = Emission frequency in MHz

Reading = Uncorrected Analyzer/Receiver reading Factor = Insertion loss of LISN + Cable Loss

Result = Reading + Factor
Limit = Limit stated in standard
Margin = Reading in reference to limit

P = Peak Reading

Q = Quasi-peak Reading
A = Average Reading

L1 = Hot side L2 = Neutral side

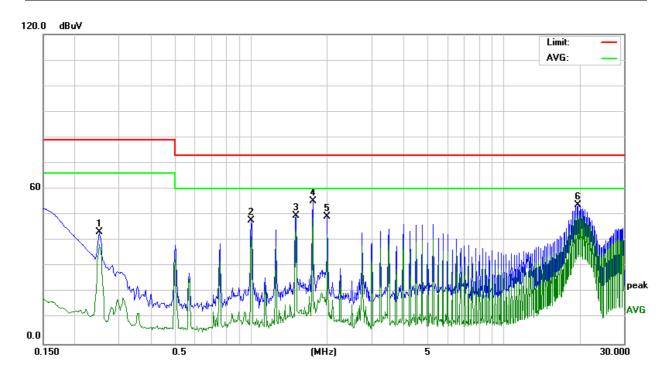

#### **Calculation Formula**

Margin (dB) = Result (dBuV) - Limit (dBuV)

## 7.1.6. TEST RESULTS

Model No.	SD8322E	6dB Bandwidth	10 kHz
Environmental Conditions	24°C, 59% RH, 1010mbar	Test Mode	Mode 2
Tested by	FRANK LIAO	Phase	L1
Standard	EN 55022 CLASS A		

Report No.: T110928201-E

	Six Highest Conducted Emission Readings						
Frequency Range Investigated				150 kHz to	30 MHz		
Freq. (MHz)	Reading (dBuV)	Factor (dB)	Result (dBuV)	Limit (dBuV)	Margin (dB)	Detector (P/Q/A)	Line (L1/L2)
0.2500	33.43	10.01	43.44	79.00	-35.56	Р	L1
1.0020	37.86	10.08	47.94	73.00	-25.06	Р	L1
1.5060	39.66	10.12	49.78	73.00	-23.22	Р	L1
1.7540	45.11	10.13	55.24	73.00	-17.76	Р	L1
2.0059	39.07	10.15	49.22	73.00	-23.78	Р	L1
19.8060	43.13	10.85	53.98	73.00	-19.02	Р	L1

Note: 1. L1 = Line One (Live Line) / L2 = Line Two (Neutral Line).

2. The emission level was or more than 2dB below the Average limit, so no re-check anymore.

Model No.	SD8322E	6dB Bandwidth	10 kHz
Environmental Conditions	24°C, 59% RH, 1010mbar	Test Mode	Mode 2
Tested by	FRANK LIAO	Phase	L2
Standard	EN 55022 CLASS A		

Report No.: T110928201-E

Six Highest Conducted Emission Readings							
Frequency Range Investigated				150 kHz to	30 MHz		
Freq. (MHz)	Reading (dBuV)	Factor (dB)	Result (dBuV)	Limit (dBuV)	Margin (dB)	Detector (P/Q/A)	Line (L1/L2)
0.2500	32.98	10.00	42.98	79.00	-36.02	Р	L2

19.8060	43.60	10.83	54.43	73.00	-18.57	Р	L2

**Note:** 1. L1 = Line One (Live Line) / L2 = Line Two (Neutral Line).

2. The emission level was or more than 2dB below the Average limit, so no re-check anymore.

# 7.2. CONDUCTED EMISSION MEASUREMENT AT TELECOMMUNICATION PORTS

#### 7.2.1. LIMITS

## For Class A Equipment

FREQUENCY (MHz)	Voltage Li	mit (dBuV)	Current Limit (dBuA)		
TREGOLIACT (IMITIZ)	Quasi-peak	Average	Quasi-peak	Average	
0.15 ~ 0.5	97 ~ 87	84 ~ 74	53 ~ 43	40 ~ 30	
0.5 ~ 30.0	87	74	43	30	

Report No.: T110928201-E

NOTE: The limits decrease linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

# For Class B Equipment

FREQUENCY (MHz)	Voltage Li	mit (dBuV)	Current Limit (dBuA)		
FREQUENCT (IVITIZ)	Quasi-peak	Average	Quasi-peak	Average	
0.15 - 0.5	84 ~ 74	74 ~ 64	40 ~ 30	30 ~ 20	
0.5 - 30.0	74	64	30	20	

NOTE: The limits decrease linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5 MHz.

#### 7.2.2. TEST INSTRUMENTS

Conducted Emission room # A							
Name of Equipment	Manufacturer	Model	Serial Number	Calibration Due			
TEST RECEIVER	R&S	ESHS20	840455/006	02/22/2012			
LISN (EUT)	SCHWARZBECK	NSLK 8127	8127527	12/13/2011			
LISN	SCHWARZBECK	NSLK 8127	8127526	12/13/2011			
BNC CABLE	MIYAZAKI	5D-FB	BNC A5	02/07/2012			
THERMO- HYGRO METER	TECPEL	DTM-303	NO.3	11/18/2011			
ISN	FCC	FCC-TLISN-T4-02	20394	06/16/2012			
RF CURRENT PROBE	FCC	F-65	255	06/14/2012			
Test S/W	EZ-EMC						

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R = No Calibration Request.

#### **7.2.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-031)

- Selecting ISN for unscreened cable or a current probe for screened cable to take measurement.
- The port of the EUT was connected to the remote side support equipment through the ISN/Current Probe and communication in normal condition.

Report No.: T110928201-E

- Making a overall range scan by using the test receiver controlled by controller and record at least six highest emissions for showing in the test report.
- Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit.
- In case of measuring on the screened cable, the current limit shall be applied; otherwise the voltage limit should be applied.
- The following test modes was scanned during the preliminary test:

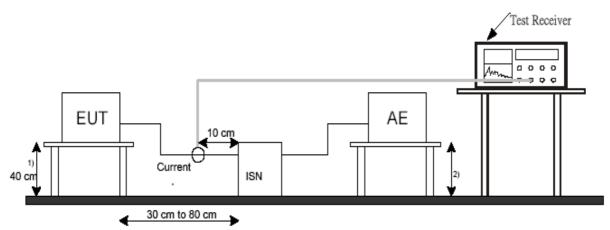

#### Modes:

1	10Mbps
2	100Mbps
3	POE MODE

• After the preliminary scan, we found the following test mode(s) producing the highest emission level and test data of the worst case was recorded.

Mode: 2.

#### **7.2.4. TEST SETUP**

Report No.: T110928201-E

- 1) Distance to the ground reference plane (vertical or horizontal).
- 2) Distance to the ground reference plane is not critical.
- For the actual test configuration, please refer to the related item Photographs of the Test Configuration.

#### 7.2.5. DATA SAMPLE

Freq.	Reading	Factor	Result	Limit	Margin	Detector
(MHz)	(dBuV)	(dB)	(dBuV)	(dBuV)	(dB)	(P/Q/A)
x.xx	62.95	0.55	63.50	87	-23.50	О

Freq. = Emission frequency in MHz

Reading = Uncorrected Analyzer/Receiver reading Factor = Insertion loss of LISN + Cable Loss

Result = Reading + Factor
Limit = Limit stated in standard
Margin = Reading in reference to limit

P = Peak Reading
Q = Quasi-peak Reading
A = Average Reading

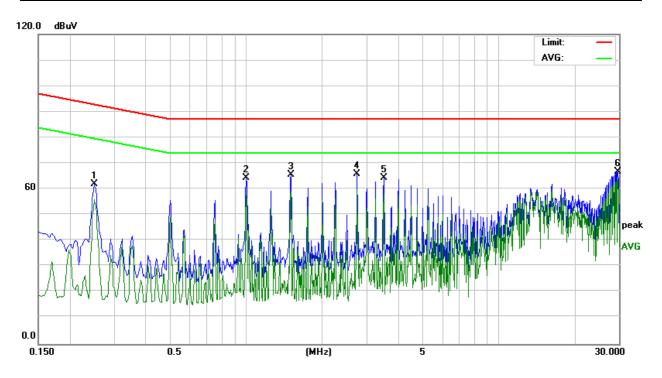

#### **Calculation Formula**

Margin (dB) = Result (dBuV) – Limit (dBuV)

## 7.2.6. TEST RESULTS

Model No.	SD8322E	6dB Bandwidth	10 kHz
Environmental Conditions	24°C, 59% RH, 1010mbar	Test Mode	Mode 2
Tested by	FRANK LIAO	Standard	EN 55022 CLASS A

Report No.: T110928201-E

	Conducted Emission Readings					
Fred	Frequency Range Investigated				kHz to 30 MI	Hz
Freq. (MHz)	Reading (dBuV)	Factor (dB)	Result (dBuV)	Limit (dBuV)	Margin (dB)	Detector (P/Q/A)
0.2500	42.21	19.89	62.10	92.75	-30.65	Р
1.0020	44.74	19.72	64.46	87.00	-22.54	Р

29.8380	46.59	20.28	66.87	87.00	-20.13	Р

Note: The emission level was or more than 2dB below the Average limit, so no re-check anymore.

## 7.3. RADIATED EMISSION MEASUREMENT

## 7.3.1. LIMITS

#### **Below 1GHz**

FREQUENCY (MHz)	dBuV/m (At 10m)		
TREGOLITOT (MITIZ)	Class A	Class B	
30 ~ 230	40	30	
230 ~ 1000	47	37	

Report No.: T110928201-E

#### **Above 1GHz**

Frequency (MHz)	Class A (dBu	ıV/m) (At 3m)	Class B (dBuV/m) (At 3m)		
r requericy (wriz)	Average	Peak	Average	Peak	
1000 ~ 3000	56	76	50	70	
3000 ~ 6000	60	80	54	74	

**NOTE**: The lower limit shall apply at the transition frequencies.

According to EN55022: 2006 + A1: 2007 clause 6.2, the measurement frequency range shown in the following table:

Highest frequency generated or used within the EUT or on which the EUT operates or tunes (MHz)	Upper frequency of measurement range (MHz)
Less than 108	1000
108-500	2000
500-1000	5000
Above 1000	5 times of the highest frequency or 6GHz, whichever is less

Report No.: T110928201-E

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

<sup>2.</sup> N.C.R = No Calibration Request.

## **7.3.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-031)

## **Procedure of Preliminary Test**

• The equipment was set up as per the test configuration to simulate typical usage per the user's manual. When the EUT is a tabletop system, a wooden turntable with a height of 0.8 meters is used which is placed on the ground plane. When the EUT is a floor standing equipment, it is placed on the ground plane which has a 15 cm non-conductive covering to insulate the EUT from the ground plane.

Report No.: T110928201-E

- Support equipment, if needed, was placed as per EN 55022.
- All I/O cables were positioned to simulate typical usage as per EN 55022.
- The EUT received AC power source from the outlet socket under the turntable. All support equipment power received from another socket under the turntable.
- The antenna was placed at 3 or 10 meter away from the EUT as stated in EN 55022.
   The antenna connected to the Spectrum Analyzer via a cable and at times a pre-amplifier would be used.
- The Analyzer / Receiver quickly scanned from 30MHz to 6000MHz. The EUT test program was started. Emissions were scanned and measured rotating the EUT to 360 degrees and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- The test mode(s) described in Item 4.1 were scanned during the preliminary test:
- After the preliminary scan, we found the test mode described in Item 4.1 producing the highest emission level.
- The EUT and cable configuration, antenna position, polarization and turntable position of the above highest emission level were recorded for the final test.

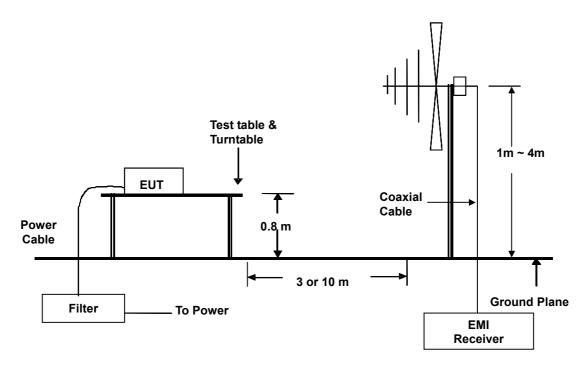

## **Procedure of Final Test**

• EUT and support equipment were set up on the turntable as per the configuration with highest emission level in the preliminary test.

Report No.: T110928201-E

- The Analyzer / Receiver scanned from 30MHz to 6000MHz. Emissions were scanned and measured rotating the EUT to 360 degrees, varying cable placement and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- Recorded at least the six highest emissions. Emission frequency, amplitude, antenna
  position, polarization and turntable position were recorded into a computer in which
  correction factors were used to calculate the emission level and compare reading to the
  applicable limit. Below 1GHz the Q.P. reading and above 1GHz the Peak and Average
  reading are presented.
- The test data of the worst-case condition(s) was recorded.

#### **7.3.4. TEST SETUP**

 For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

## 7.3.5. DATA SAMPLE

#### **Below 1GHz**

Freq. (MHz)	Reading (dBuV)	Factor (dB/m)	Result (dBuV/m)	Limit (dBuV/m)	Margin (dB)	Detector (P/Q)	Pol. (H/V)
X.XX	14.0	12.2	26.2	40	-13.8	Q	Н

Report No.: T110928201-E

#### **Above 1GHz**

Freq.	Reading	Factor	Result	Limit	Margin	Detector	Pol.
(MHz)	(dBuV)	(dB/m)	(dBuV/m)	(dBuV/m)	(dB)	(P/A)	(H/V)
x.xx	42.95	0.55	43.50	60	-16.50	Α	Н

Freq. = Emission frequency in MHz

Reading = Uncorrected Analyzer/Receiver reading Factor = Antenna Factor + Cable Loss - Amplifier Gain

Result = Reading + Factor Limit = Limit stated in standard Margin = Reading in reference to limit

P = Peak Reading

Q = Quasi-peak Reading A = Average Reading

H = Antenna Polarization: Horizontal V = Antenna Polarization: Vertical

## **Calculation Formula**

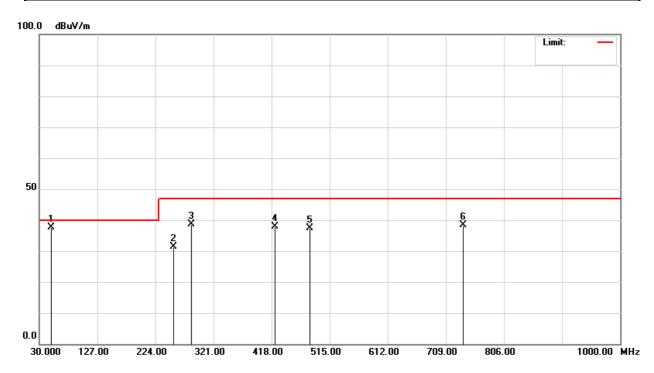

Margin (dB) = Result (dBuV/m) - Limit (dBuV/m)

## 7.3.6. TEST RESULTS

## **Below 1GHz**

Model No.	SD8322E	Test Mode	Mode 2

#### 7.4. HARMONICS CURRENT MEASUREMENT

#### 7.4.1. LIMITS OF HARMONICS CURRENT MEASUREMENT

Limits for Class A equipment						
Harmonics	Max. permissible					
Order	harmonics current					
n	A					
Od	d harmonics					
3	2.30					
5	1.14					
7	0.77					
9	0.40					
11	0.33					
13	0.21					
15<=n<=39	0.15x15/n					
Eve	en harmonics					
2	1.08					
4	0.43					
6	0.30					
8<=n<=40	0.23x8/n					

Limits for Class D equipment								
Harmonics Order n	Max. permissible harmonics current per watt mA/W	Max. permissible harmonics current A						
	Odd Harmonics only							
3	3.4	2.30						
5	1.9	1.14						
7	1.0	0.77						
9	0.5	0.40						
11	0.35	0.33						
13	0.30	0.21						
15<=n<=39	3.85/n	0.15x15/n						

Report No.: T110928201-E

**NOTE:** 1. Class A and Class D are classified according to item 7.4.3.

2. According to section 7 of EN 61000-3-2, the above limits for all equipment except for lighting equipment having an active input power > 75 W and no limits apply for equipment with an active input power up to and including 75 W.

#### 7.4.2. TEST INSTRUMENTS

Name of Equipment	Manufacturer	Model	Serial Number	Calibration Due			
H/F Measurement System	EMC Partner	HAR1000-1P	189	07/31/2012			
Digital Power Meter	Digital Power Meter Protronix		201091	No Calibration Required			
Software		HARCS V4.18					

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

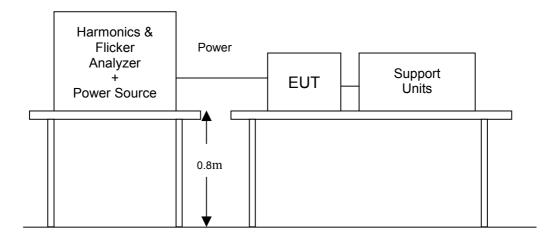

#### **7.4.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-029)

 The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the maximum harmonic components under normal operating conditions for each successive harmonic component in turn.

Report No.: T110928201-E

- The classification of EUT is according to section 5 of EN 61000-3-2.
- The EUT is classified as follows:
  - Class A: Balanced three-phase equipment, Household appliances excluding equipment as Class D, Tools excluding portable tools, Dimmers for incandescent lamps, audio equipment, equipment not specified in one of the three other classes.
  - Class B: Portable tools; Arc welding equipment which is not professional equipment.
  - Class C: Lighting equipment.
  - Class D: Equipment having a specified power less than or equal to 600 W of the following types: Personal computers and personal computer monitors and television receivers.
- The correspondent test program of test instrument to measure the current harmonics emanated from EUT is chosen. The measure time shall be not less than the time necessary for the EUT to be exercised.

#### 7.4.4. TEST SETUP

• For the actual test configuration, please refer to the related item - Photographs of the Test Configuration.

#### 7.4.5. TEST RESULTS

Power Consumption	15.56W	Test Mode	Operating
<b>Environmental Conditions</b>	18°C, 58% RH, 1008mbar	Tested by	JOHN YEN

**NOTE:** 1. Limits classified according to item 7.4.1.

Report No.: T110928201-E

## Test result of EN 61000-3-2

Urms = 230.1V Freq = 50.065 Range: 2 A Irms = 0.104A 0.207A 2.000 lpk = P = 15.56W S 23.82VA pf = 0.653

<sup>2.</sup> According to clause 7 of EN 61000-3-2: 2006, equipment with a rated power of 75W or less, no limits apply. The test result is only for reference.

## 7.5. VOLTAGE FLUCTUATION AND FLICKER MEASUREMENT

#### 7.5.1. LIMITS OF VOLTAGE FLUCTUATION AND FLICKER MEASUREMENT

TEST ITEM	LIMIT	REMARK			
P <sub>st</sub>	1.0	P <sub>st</sub> means short-term flicker indicator.			
P <sub>lt</sub>	0.65	P <sub>lt</sub> means long-term flicker indicator.			
T <sub>dt</sub> (ms)	500	T <sub>dt</sub> means maximum time that dt exceeds 3 %.			
d <sub>max</sub> (%)	4%	d <sub>max</sub> means maximum relative voltage change.			
dc (%)	3.3%	dc means relative steady-state voltage change			

Report No.: T110928201-E

#### 7.5.2. TEST INSTRUMENTS

Report No.: T110928201-E

# 8.2. GENERAL PERFORMANCE CRITERIA DESCRIPTION

Criteria A:	The apparatus shell continues to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the manufacturer does not specify the minimum performance level or the permissible performance loss, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
	After test, the apparatus shell continues to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomenon below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance.
Criteria B:	During the test, degradation of performance is however allowed. However, no change of operating state if stored data is allowed to persist after the test. If the manufacturer does not specify the minimum performance level or the permissible performance loss, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
Criteria C:	Temporary loss of function is allowed, provided the functions is self-recoverable or can be restored by the operation of controls by the user in accordance with the manufacturer instructions.
	Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

Report No.: T110928201-E

# 8.3. ELECTROSTATIC DISCHARGE (ESD)

#### 8.3.1. TEST SPECIFICATION

Basic Standard: IEC 61000-4-2

Discharge Impedance: 330 ohm / 150 pF

**Discharge Voltage:** Air Discharge: 2 ; 4 ; 8 kV (Direct)

Contact Discharge: 2; 4 kV (Direct/Indirect)

Report No.: T110928201-E

Polarity: Positive & Negative

Number of Discharge: Air Discharge: min. 10 times at each test point for each polarity

Contact Discharge: min. 200 times in total

**Discharge Mode:** Single Discharge

1 second minimum

#### 8.3.2. TEST INSTRUMENT

IMMUNITY SHIELDED ROOM							
Name of Equipment	Manufacturer	Model	Serial Number	Calibration Due			
ESD Generator	Teseq	NSG 437	249	12/18/2011			
Aneroid Barometer	Sato	7610-20	89090	11/25/2011			
Thermo-Hygro meter	TECPEL	DTM-303	080269	05/09/2012			

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

## **8.3.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-022)

The discharges shall be applied in two ways:

- a) Contact discharges to the conductive surfaces and coupling planes:
  - The EUT shall be exposed to at least 200 discharges, 100 each at negative and positive polarity, at a minimum of four test points. One of the test points shall be subjected to at least 50 indirect discharges to the center of the front edge of the Horizontal Coupling Plane (HCP). The remaining three test points shall each receive at least 50 direct contact discharges. If no direct contact test points are available, then at least 200 indirect discharges shall be applied in the indirect mode. Test shall be performed at a maximum repetition rate of one discharge per second.

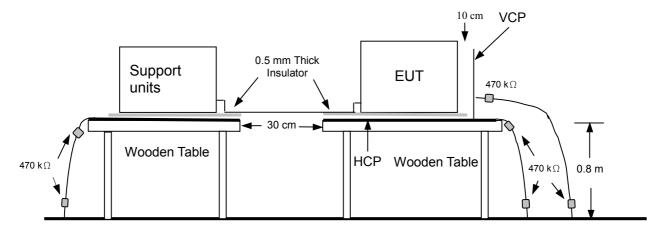

Report No.: T110928201-E

b) Air discharges at slots and apertures and insulating surfaces: On those parts of the EUT where it is not possible to perform contact discharge testing, the equipment should be investigated to identify user accessible points where breakdown may occur. Such points are tested using the air discharge method. This investigation should be restricted to those area normally handled by the user. A minimum of 10 single air discharges shall be applied to the selected test point for each such area.

The basic test procedure was in accordance with IEC 61000-4-2:

- a) The EUT was located 0.1 m minimum from all side of the **HCP** (dimensions 1.6m x 0.8m).
- b) The support units were located another table 30 cm away from the EUT, but direct support unit was/were located at same location as EUT on the HCP and keep at a distance of 10 cm with EUT.
- c) The time interval between two successive single discharges was at least 1 second.
- d) Contact discharges were applied to the non-insulating coating, with the pointed tip of the generator penetrating the coating and contacting the conducting substrate.
- e) Air discharges were applied with the round discharge tip of the discharge electrode approaching the EUT as fast as possible (without causing mechanical damage) to touch the EUT. After each discharge, the ESD generator was removed from the EUT and re-triggered for a new single discharge. The test was repeated until all discharges were complete.
- f) At least ten single discharges (in the most sensitive polarity) were applied at the front edge of each HCP opposite the center point of each unit of the EUT and 0.1 meters from the front of the EUT. The long axis of the discharge electrode was in the plane of the HCP and perpendicular to its front edge during the discharge.
- g) At least ten single discharges (in the most sensitive polarity) were applied to the center of one vertical edge of the Vertical Coupling Plane (VCP) in sufficiently different positions that the four faces of the EUT were completely illuminated. The VCP (dimensions 0.5m x 0.5m) was placed vertically to and 0.1 meters from the EUT.

#### **8.3.4. TEST SETUP**

Report No.: T110928201-E

**Ground Reference Plane** 

 For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

#### NOTE:

#### **TABLE-TOP EQUIPMENT**

The configuration consisted of a wooden table 0.8 meters high standing on the **Ground Reference Plane**. The **GRP** consisted of a sheet of aluminum at least 0.25mm thick, and 2.5 meters square connected to the protective grounding system. A **Horizontal Coupling Plane** (1.6m x 0.8m) was placed on the table and attached to the **GRP** by means of a cable with 940k \_ total impedance. The equipment under test, was installed in a representative system as described in section 7 of IEC 61000-4-2, and its cables were placed on the **HCP** and isolated by an insulating support of 0.5mm thickness. A distance of 1-meter minimum was provided between the EUT and the walls of the laboratory and any other metallic structure.

#### FLOOR-STANDING EQUIPMENT

The equipment under test was installed in a representative system as described in section 7 of IEC 61000-4-2, and its cables were isolated from the Ground Reference Plane by an insulating support of 0.1-meter thickness. The GRP consisted of a sheet of aluminum that is at least 0.25mm thick, and 2.5 meters square connected to the protective grounding system and extended at least 0.5 meters from the EUT on all sides.

## 8.4. RADIATED, RADIO-FREQUENCY, ELECTROMAGNETIC FIELD (RS)

Report No.: T110928201-E

#### 8.4.1. TEST SPECIFICATION

**Basic Standard:** IEC 61000-4-3

Frequency Range: 80 MHz ~1000 MHz

Field Strength: 3 V/m

**Modulation:** 1kHz Sine Wave, 80%, AM Modulation

Frequency Step: 1 % of preceding frequency value

**Polarity of Antenna:** Horizontal and Vertical

Test Distance: 3 m
Antenna Height: 1.5m

#### 8.4.2. TEST INSTRUMENT

	733 RS Chamber								
Name of Equipment	Manufacturer	Model	Serial Number	Calibration Due					
Calibration of Field	N/A	Chamber#RS	Ver(Hor)-201006	06/09/2012					
Signal Generator	Agilent	E4421B	MY43350597	05/18/2012					
Electric Field Probe	AR	FL7006	0330722	07/12/2012					
RF Power Meter	Boonton	4231A	39601	08/14/2012					
Amplifier	AR	100W1000M1	17564	No Calibration Required					
Direction Coupler	AR	DC6180A	312189	No Calibration Required					
Broadband Antenna	AR	AT1080	311819	No Calibration Required					
Thermo-Hygro meter	TFA	N/A	NO.6	11/09/2011					
Software	SW1005 Relrase 1.4.exe								

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

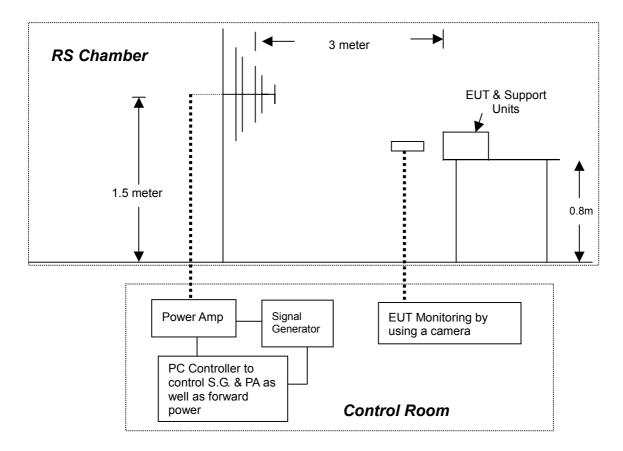

2. N.C.R.= No Calibration required

#### **8.4.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-023)

The test procedure was in accordance with IEC 61000-4-3

- a) The testing was performed in a fully anechoic chamber. The transmit antenna was located at a distance of 3 meters from the EUT.
- b) The frequency range is swept from 80 MHz to 1000 MHz, with the signal 80% amplitude modulated with a 1kHz sine-wave. The rate of sweep did not exceed 1.5 x 10 <sup>-3</sup> decade/s, where the frequency range is swept incrementally, the step size was 1% of preceding frequency value.
- c) The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.
- d) The test was performed with the EUT exposed to both vertically and horizontally polarized fields on each of the four sides.

#### 8.4.4. TEST SETUP

Report No.: T110928201-E

 For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

#### NOTE:

#### **TABLETOP EQUIPMENT**

The EUT installed in a representative system as described in section 7 of IEC 61000-4-3 was placed on a non-conductive table 0.8 meters in height. The system under test was connected to the power and signal wire according to relevant installation instructions.

#### **FLOOR STANDING EQUIPMENT**

The EUT installed in a representative system as described in section 7 of IEC 61000-4-3 was placed on a non-conductive wood support 0.1 meters in height. The system under test was connected to the power and signal wire according to relevant installation instructions.

## 8.5. ELECTRICAL FAST TRANSIENT (EFT)

#### 8.5.1. TEST SPECIFICATION

Basic Standard: IEC 61000-4-4

Test Voltage: AC Power Port: 1kV

Signal Ports and Telecommunication Ports: 0.5kV

Report No.: T110928201-E

**Polarity:** Positive & Negative

**Impulse Frequency:** 5 kHz

Impulse Wave-shape: 5/50 ns

**Burst Duration:** 15 ms

Burst Period: 300 ms

**Test Duration:** Not less than 1 min.

#### 8.5.2. TEST INSTRUMENT

Immunity Shield Room									
Name of Equipment Manufacturer Model Serial Number Calibration									
EMC Immunity Tester	EMC Partner	TRANSIENT 2000	1117	03/01/2012					
Capacitive Clamp	EMC-Partner	EMC-Partner CN-EFT1000 589 No Calibratio Required							
Software	Genecs.exe								

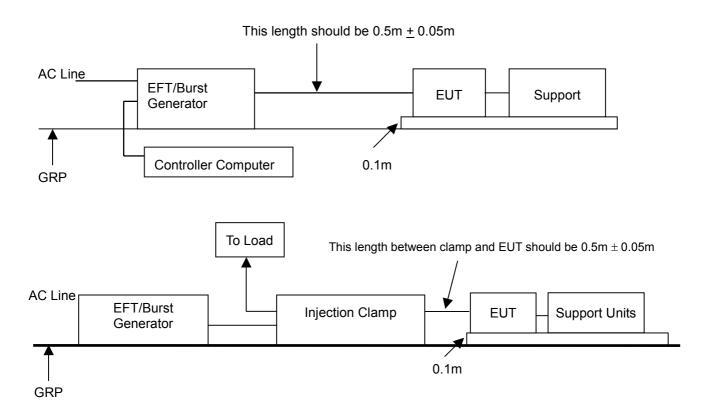

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R.= No Calibration required

#### **8.5.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-024)

- a) Both positive and negative polarity discharges were applied.
- b) The length of the "hot wire" from the coaxial output of the EFT generator to the terminals on the EUT should not exceed 0.5 meter.
- c) The duration time of each test sequential was 1 minute.
- d) The transient/burst waveform was in accordance with IEC 61000-4-4, 5/50ns.

#### 8.5.4. TEST SETUP

Report No.: T110928201-E

 For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

#### NOTE:

#### **TABLETOP EQUIPMENT**

The configuration consisted of a wooden table (0.1m high) standing on the Ground Reference Plane. The GRP consisted of a sheet of aluminum (at least 0.25mm thick and 2.5m square) connected to the protective grounding system. A minimum distance of 0.5m was provided between the EUT and the walls of the laboratory or any other metallic structure.

#### FLOOR STANDING EQUIPMENT

The EUT installed in a representative system as described in section 7 of IEC 61000-4-4 and its cables, were isolated from the Ground Reference Plane by an insulating support that is 0.1-meter thick. The GRP consisted of a sheet of aluminum (at least 0.25mm thick and 2.5m square) connected to the protective grounding system.

#### **8.6. SURGE IMMUNITY TEST**

#### 8.6.1. TEST SPECIFICATION

Basic Standard: IEC 61000-4-5

Wave-Shape: Combination Wave

1.2/50 µs Open Circuit Voltage 8/20 µs Short Circuit Current

**Test Voltage:** AC Power Port~ line to line: 1kV, line to ground: 2kV

Report No.: T110928201-E

Surge Input/Output: AC Power Line: L-N / L-PE / N-PE

**Generator Source Impedance:** 2 ohm between networks

12 ohm between network and ground

**Polarity:** Positive/Negative

**Phase Angle:** 0° / 90° / 180° / 270°

Pulse Repetition Rate: 1 time / min. (maximum)

**Number of Tests:** 5 positive and 5 negative at selected points

#### 8.6.2. TEST INSTRUMENT

	Immunity Shield Room								
Name of Equipment Manufacturer Model Serial Number Calibration									
EMC Immunity Tester	EMC Partner	TRANSIENT 2000	1117	03/01/2012					
Signal and Data Lines Coupling Network	Schaffner	Schaffner CDN118 19328							
Software	Genecs.exe								

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R.= No Calibration required

#### **8.6.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-025)

a) For EUT power supply:

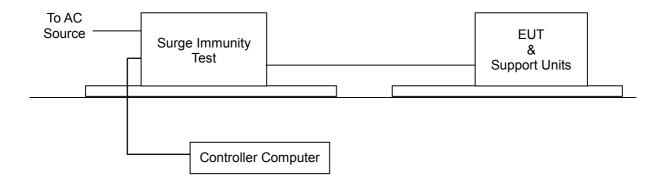

The surge is applied to the EUT power supply terminals via the capacitive coupling network. Decoupling networks are required in order to avoid possible adverse effects on equipment not under test that may be powered by the same lines, and to provide sufficient decoupling impedance to the surge wave. The power cord between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.

- b) For test applied to unshielded un-symmetrically operated interconnection lines of EUT: The surge was applied to the lines via the capacitive coupling. The coupling / decoupling networks didn't influence the specified functional conditions of the EUT. The interconnection line between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.
- c) For test applied to unshielded symmetrically operated interconnection / telecommunication lines of EUT:

The surge was applied to the lines via gas arrestors coupling. Test levels below the ignition point of the coupling arrestor were not specified. The interconnection line between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R.= No Calibration required

#### 8.7.3. TEST PROCEDURE (please refer to measurement standard or CCS SOP PA-026)

The EUT shall be tested within its intended operating and climatic conditions.

The test shell performed with the test generator connected to each of the coupling and decoupling devices in turn, while the other non-excited RF input ports of the coupling devices are terminated by a 50-ohm load resistor.

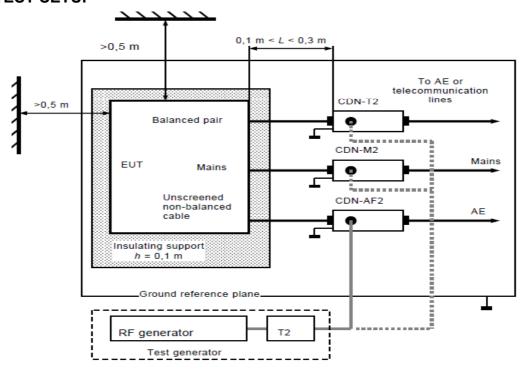

Report No.: T110928201-E

The frequency range was swept from 150 kHz to 80 MHz, using the signal level established during the setting process and with a disturbance signal of 80 % amplitude. The signal was modulated with a 1 kHz sine wave, pausing to adjust the RF signal level or the switch coupling devices as necessary. The sweep rate was  $1.5 \times 10^{-3}$  decades/s. Where the frequency range is swept incrementally, the step size was 1 % of preceding frequency value from 150 kHz to 80 MHz.

The dwell time at each frequency was less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies such as clock frequency(ies) and harmonics or frequencies of dominant interest, was analyzed separately.

Attempts was made to fully exercise the EUT during testing, and to fully interrogate all exercise modes selected for susceptibility.

#### **8.7.4. TEST SETUP**

Note: 1. The EUT is setup 0.1m above Ground Reference Plane

- 2. The CDNs and / or EM clamp used for real test depends on ports and cables configuration of EUT.
- For the actual test configuration, please refer to the related item Photographs of the Test Configuration.

#### NOTE:

#### TABLE-TOP AND FLOOR-STANDING EQUIPMENT

The equipment to be tested is placed on an insulating support of 0.1 meters height above a ground reference plane. All relevant cables shall be provided with the appropriate coupling and decoupling devices at a distance between 0.1 meters and 0.3 meters from the projected geometry of the EUT on the ground reference plane.

# Compliance Certification Services Inc.

Magnetic Field Meter	Sypris	4080	0247	03/06/2012			

Report No.: T110928201-E

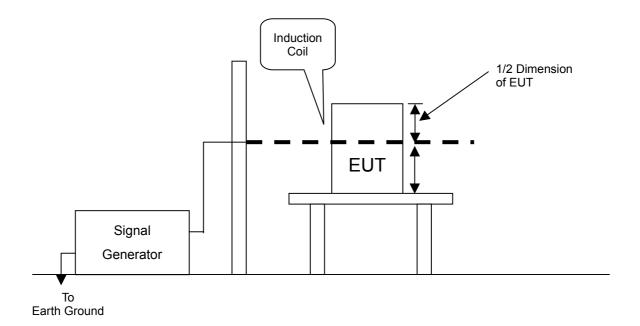

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. N.C.R.= No Calibration required

#### **8.8.3. TEST PROCEDURE** (please refer to measurement standard or CCS SOP PA-027)

- a. The equipment is configured and connected to satisfy its functional requirements. It shall be placed on the GRP with the interposition of a 0.1m-thick insulating support.
- b. The equipment cabinets shall be connected to the safety earth directly on the GRP via the earth terminal of the EUT.
- c. The power supply, input and output circuits shall be connected to the sources of power supply, control and signal.
- d. The cables supplied or recommended by the equipment manufacturer shall be used. 1 meter of all cables used shall be exposed to the magnetic field.

#### 8.8.4. TEST SETUP

Report No.: T110928201-E

 For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

#### NOTE:

#### TABLETOP EQUIPMENT

The equipment shall be subjected to the test magnetic field by using the induction coil of standard dimension (1 m x 1 m). The induction coil shall then be rotated by 90 degrees in order to expose the EUT to the test field with different orientations.

#### **FLOOR-STANDING EQUIPMENT**

The equipment shall be subjected to the test magnetic field by using induction coils of suitable dimensions. The test shall be repeated by moving and shifting the induction coils, in order to test the whole volume of the EUT for each orthogonal direction. The test shall be repeated with the coil shifted to different positions along the side of the EUT, in steps corresponding to 50 % of the shortest side of the coil. The induction coil shall then be rotated by 90 degrees in order to expose the EUT to the test field with different orientations.
